

Connect your remote computer to your office computer

These directions assume that you are running Windows XP at your home and it has Remote Desktop Connection installed all ready. If you do not have Windows XP at your home you can download it for **FREE** from Microsoft's at the following location.

<http://www.microsoft.com/windowsxp/downloads/tools/rdclientdl.msp>

1. On your home computer, click **Start**, point to **All Programs**, and then point to **Accessories**.
2. In the **Accessories** menu, point to **Communications**, and then click **Remote Desktop Connection**.
3. In the **Computer** box, type your computer or IP address if known

4. Click **Connect**.
5. When the **Log On to Windows** dialog box appears, type your user name, password and then click **OK**.

The Remote Desktop window opens, and you see the desktop settings, files, and programs that are on your host computer, which in this example is your work computer. Your host computer remains locked, and nobody can access it without a password. In addition, no one will be able to see the work you are doing remotely.

To end your Remote Desktop session:

1. Click **Start**, and then click **Log Off** at the bottom of the **Start menu**.
2. When prompted, click **Log Off**.
